

AnswerBot

PHASE 01 OF 08 | BRAINSTORMING & IDEATION

Project overview

AnswerBot is designed to help support teams turn repetitive customer questions into organized, searchable answers. Its brief describes a Node.js and Express API backed by MongoDB, with JWT authentication, role-aware routes, FAQ generation, and semantic search.

Project description

A secure REST API for FAQ authoring, account access, AI-assisted content creation, and semantic search.

Project status

Not stated in the source brief. Update this document when the team records an agreed status.

Project capabilities

- FAQ authoring and management
- AI-assisted answer generation
- Semantic search
- JWT authentication and route guards

Phase description

Define the user problem, explore ideas, and agree which opportunity is worth solving.

Project-specific phase focus

Frame the support team's repeated-question backlog and the people who create or consume answers.

Phase status and progress

Status: Not stated in the source material.

Progress: Not recorded in the source material.

Tasks and requirements

- ☐ List and group solution ideas
- ☐ Prioritize ideas by feasibility and importance
- ☐ Write the customer problem statement
- ☐ Map what the user says, thinks, does, and feels
