

AnswerBot

PHASE 02 OF 08 | REQUIREMENT ANALYSIS

Project overview

AnswerBot is designed to help support teams turn repetitive customer questions into organized, searchable answers. Its brief describes a Node.js and Express API backed by MongoDB, with JWT authentication, role-aware routes, FAQ generation, and semantic search.

Project description

A secure REST API for FAQ authoring, account access, AI-assisted content creation, and semantic search.

Project status

Not stated in the source brief. Update this document when the team records an agreed status.

Project capabilities

- FAQ authoring and management
- AI-assisted answer generation
- Semantic search
- JWT authentication and route guards

Phase description

Turn the validated problem into functional, non-functional, data-flow, and technology requirements.

Project-specific phase focus

Specify FAQ ownership, publication, categories, authentication, AI generation, and semantic search needs.

Phase status and progress

Status: Not stated in the source material.

Progress: Not recorded in the source material.

Tasks and requirements

- [] Map the customer journey and touchpoints
- [] Diagram system data flows
- [] Document functional and non-functional requirements
- [] Choose and justify the technology stack

Relevant documents and data
