

AnswerBot

PHASE 03 OF 08 | PROJECT DESIGN PHASE

Project overview

AnswerBot is designed to help support teams turn repetitive customer questions into organized, searchable answers. Its brief describes a Node.js and Express API backed by MongoDB, with JWT authentication, role-aware routes, FAQ generation, and semantic search.

Project description

A secure REST API for FAQ authoring, account access, AI-assisted content creation, and semantic search.

Project status

Not stated in the source brief. Update this document when the team records an agreed status.

Project capabilities

- FAQ authoring and management
- AI-assisted answer generation
- Semantic search
- JWT authentication and route guards

Phase description

Check problem-solution fit and describe the proposed solution and its architecture.

Project-specific phase focus

Design how creator workflows, FAQ records, and AI-assisted search fit together.

Phase status and progress

Status: Not stated in the source material.

Progress: Not recorded in the source material.

Tasks and requirements

- [] Complete the problem-solution fit canvas
- [] Describe the proposed solution and user value
- [] Diagram the solution architecture
