

AnswerBot

PHASE 04 OF 08 | PROJECT PLANNING PHASE

Project overview

AnswerBot is designed to help support teams turn repetitive customer questions into organized, searchable answers. Its brief describes a Node.js and Express API backed by MongoDB, with JWT authentication, role-aware routes, FAQ generation, and semantic search.

Project description

A secure REST API for FAQ authoring, account access, AI-assisted content creation, and semantic search.

Project status

Not stated in the source brief. Update this document when the team records an agreed status.

Project capabilities

- FAQ authoring and management
- AI-assisted answer generation
- Semantic search
- JWT authentication and route guards

Phase description

Break requirements into a prioritized backlog and a realistic sprint plan with owners and estimates.

Project-specific phase focus

Prioritize authoring, review, generation, and search stories for the support workflow.

Phase status and progress

Status: Not stated in the source material.

Progress: Not recorded in the source material.

Tasks and requirements

- [] Create the product backlog and user stories
- [] Estimate and prioritize each story
- [] Assign work and team members
- [] Set sprint dates and review milestones
