

AnswerBot

PHASE 05 OF 08 | PROJECT DEVELOPMENT PHASE

Project overview

AnswerBot is designed to help support teams turn repetitive customer questions into organized, searchable answers. Its brief describes a Node.js and Express API backed by MongoDB, with JWT authentication, role-aware routes, FAQ generation, and semantic search.

Project description

A secure REST API for FAQ authoring, account access, AI-assisted content creation, and semantic search.

Project status

Not stated in the source brief. Update this document when the team records an agreed status.

Project capabilities

- FAQ authoring and management
- AI-assisted answer generation
- Semantic search
- JWT authentication and route guards

Phase description

Build the solution, keep its code organized, and track which planned features are implemented.

Project-specific phase focus

Build the documented FAQ, account, and AI capabilities as distinct API modules.

Phase status and progress

Status: Not stated in the source material.

Progress: Not recorded in the source material.

Tasks and requirements

- [] Organize code into readable, reusable modules
- [] Implement the core solution against requirements
- [] Record feature names, modules, and implementation status
- [] Review code layout and maintainability

Relevant documents and data
