

AnswerBot

PHASE 06 OF 08 | PROJECT TESTING

Project overview

AnswerBot is designed to help support teams turn repetitive customer questions into organized, searchable answers. Its brief describes a Node.js and Express API backed by MongoDB, with JWT authentication, role-aware routes, FAQ generation, and semantic search.

Project description

A secure REST API for FAQ authoring, account access, AI-assisted content creation, and semantic search.

Project status

Not stated in the source brief. Update this document when the team records an agreed status.

Project capabilities

- FAQ authoring and management
- AI-assisted answer generation
- Semantic search
- JWT authentication and route guards

Phase description

Plan and run tests that show how the solution behaves, including performance under expected load.

Project-specific phase focus

Test protected access, FAQ operations, generated content, and semantic query behavior.

Phase status and progress

Status: Not stated in the source material.

Progress: Not recorded in the source material.

Tasks and requirements

- [] Choose test tools, modules, and environment
- [] Define representative test scenarios
- [] Capture performance results and observations
- [] Record issues and follow-up actions

Relevant documents and data

Project brief: AnswerBot- AI-powered FAQ and customer support automation.docx

Phase templates:

- Performance Testing (6.Project Testing/Performance Testing.pdf)

Project technology stack

- Node.js
- Express.js
- MongoDB
- Mongoose
- Gemini AI
