

AnswerBot

PHASE 07 OF 08 | PROJECT DOCUMENTATION

Project overview

AnswerBot is designed to help support teams turn repetitive customer questions into organized, searchable answers. Its brief describes a Node.js and Express API backed by MongoDB, with JWT authentication, role-aware routes, FAQ generation, and semantic search.

Project description

A secure REST API for FAQ authoring, account access, AI-assisted content creation, and semantic search.

Project status

Not stated in the source brief. Update this document when the team records an agreed status.

Project capabilities

- FAQ authoring and management
- AI-assisted answer generation
- Semantic search
- JWT authentication and route guards

Phase description

Package the executable project, setup instructions, and documentation needed to review or run it.

Project-specific phase focus

Package the API source, environment setup, routes, and FAQ workflow documentation.

Phase status and progress

Status: Not stated in the source material.

Progress: Not recorded in the source material.

Tasks and requirements

- [] Organize source and executable files
- [] Write setup and run instructions
- [] Prepare project documentation
- [] Check the submission against the deliverables list

Relevant documents and data

Project brief: AnswerBot- AI-powered FAQ and customer support automation.docx

Phase templates:

- Project Executable Files (7.Project Documentation/Project Executable Files.pdf)
- Sample Project Documentation (example) (7.Project Documentation/Sample Project Documentation.pdf)

Project technology stack

- Node.js
- Express.js
- MongoDB
- Mongoose
- Gemini AI
