

AnswerBot

PHASE 08 OF 08 | PROJECT DEMONSTRATION

Project overview

AnswerBot is designed to help support teams turn repetitive customer questions into organized, searchable answers. Its brief describes a Node.js and Express API backed by MongoDB, with JWT authentication, role-aware routes, FAQ generation, and semantic search.

Project description

A secure REST API for FAQ authoring, account access, AI-assisted content creation, and semantic search.

Project status

Not stated in the source brief. Update this document when the team records an agreed status.

Project capabilities

- FAQ authoring and management
- AI-assisted answer generation
- Semantic search
- JWT authentication and route guards

Phase description

Plan a clear demonstration, show proposed features, coordinate the team, and explain future growth.

Project-specific phase focus

Demonstrate an FAQ workflow from authoring through AI assistance and search.

Phase status and progress

Status: Not stated in the source material.

Progress: Not recorded in the source material.

Tasks and requirements

- [] Plan the demo flow, timing, and responsibilities
- [] Verify proposed features are ready to demonstrate
- [] Agree team communication and handoffs
- [] Document scalability limits and future plans
- [] Record each member's demo contribution
